

Icing Is a Killer - Do Not Let Winter Bring You down

At this event you will learn about aircraft icing, why it forms on aircraft, and what to do about it.

Get ready for winter. Aircraft icing during flight can be catastrophic. It disrupts the flow of air over the aircraft diminishing the wings maximum lift and propeller's thrust thus reducing the angle of attack for maximum lift, which in turn, adversely effects an aircraft's handling characteristics while significantly increasing drag. Don't miss this informative briefing. Click the link below and register TODAY.

Directions: The meeting will be held in the Pilot's Lounge. See added PDF map directions the Signature East Hangar.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
